QRP-L Digest 3202

Topics covered in this issue include:

- 1) [168539] QRP-L
by "Maurice Haynes" <kv7g@toast.net>
- 2) [168540] Elmer 160 & PIC-EL
by Jean Jibouleau <jiboulj@globetrotter.net>
- 3) [168541] Re: The Truth about Yahoo
by "Lee Bahr" <pulsarxp@earthlink.net>
- 4) [168542] Re: The future of QRP-L
by "Dale Anderson \ (KB0VCC\)" <KB0VCC@Adelphia.Net>
- 5) [168543] Re: Goodbye QRP-l , thanks Jim , and a question
by George Fremin III <geoiii@kkn.net>
- 6) [168544] KITS: AT SPRINT II
by Steven Weber <kd1jv@moose.ncia.net>
- 7) [168545] Next kit offering
by Steven Weber <kd1jv@moose.ncia.net>
- 8) [168546] Re: The future of QRP-L
by George Fremin III <geoiii@kkn.net>
- 9) [168547] Re: post-mortem of qrp-l
by John Sielke <jsielke@pobox.com>
- 10) [168548] Re: [ke4ma] Re: QRP-L to QTH.NET?
by "Mark Andrews \ (KE4MA\)" <KE4MA@KE4IOF.com>
- 11) [168549] Re: post-mortem of qrp-l
by John Sielke <jsielke@pobox.com>
- 12) [168550] Re: Goodbye QRP-l , thanks Jim , and a question
by ed miller <millered@magnet.fsu.edu>

After reading all of the posts since Jim's announcement, I can honestly say that I clearly see why he decided to abandon this list.

Hello everyone,
My PIC-EL kit is complete now and I am going to the test stage.
It feel good. We will see it the little baby is alive later.

For now I wonder
Do you use some kind of box for the PIC-EL ?
Does not seem practical to use a box, unless the cover is open !!!

For now my kit will run on 12V gellcell battery.
Does someone could tell me the average current use by the PIC-EL
Maybe I could put it on a plastic plate with a small battery.
Tell me what you did with your PIC-EL

Do you want to filter all my junk mail I am getting on Yahoo because my
address is leaking out to the whole world from lists I have joined there?
If we go Yahoo, I'm out of here! We have plenty of alternative choices
light years better then Yahoo Groups. I do not have worry of Yahoo, just
contempt and experience with them! They will not be my alternative.

Thanks for all your hard work over the years, Jim. You deserve nothing but praise. I've been reading QRP-L since 1994, which predates my license by two years! It is the enthusiasm that was shared here over the years which challenged me to become licensed and upgrade rapidly to Extra, so long ago. Yes, this group has changed. It started a few years ago when some obviously deeply-disturbed narcissistic individuals, threatened by the technical and professional expertise of some top-notch QRPers, started to drive away the core members in lieu of the therapy they so badly needed. Now it has come to THIS! Sure, there are other QRP "watering holes" out there, but this one was the HUB of the wheel. This is a tragic loss to the QRP community.

Hopefully the archives will remain preserved on-line by someone. There's a gold-mine of great technical and operational discussions in there. Those of you who are new to this soon-to-be-defunct list, would serve yourself well to read through some of the archives before they disappear. You will see what a warm, enthusiastic, tolerant, and supportive place QRP-L once was. And with a little research, it becomes obvious just who the malignant members were that brought the list to its demise.

Jim should be canonized for his near-limitless tolerance over the years, where others would have sooner walked away. We all owe him our gratitude and respect for keeping the dream of QRP-L alive for as long as he has.

73/72,
Dale

P.S. Still keepin' my QRP-L #91 in my sig' file, so there! Plllllptttttt!

You have several choices - go here and grab all the messages.
<http://listserv.lehigh.edu/lists/qrp-l/archives.html>

I think Jim said the archives and such will stay where they are:

I also have an archive of all the messages here:

<http://www.kkn.net/archives/html/QRP-L/>

I plan on keeping these where they are and I will continue to archive the next "QRP-L" since I find that having a searchable archive is very useful.

Was going to wait to announce this, but can't anymore!

I've ordered boards and started to buy parts for the new AT Sprint II rig. I hope to begin shipping the kits by early April. Please let me know if you definatly want one of these rigs, even if you expessed interest before.

Info about the rig can be found on my web page, <<http://www.qsl.net/kd1jv/>>

Here's a heads up on the next kit I plan on developing for this coming summer.

It will be a test box for working on QRP rigs. It will intergrate a number of test functions into one box.

1. 10 watt dummy load
2. RF power meter
3. RF volt meter
4. Frequency counter
5. AF signal generator
6. Possibly pervisions for adding a NJQRP DDS daughter board for RF signal generation
7. Suggestions for additional functions welcome.

I would indeed be careful Lloyd. I had considered telling the Alumni Association to stuff it. This was after some VERY nasty personal email from today's wounded hero. However, I did not, nor did I make the offending phone call. However, I do agree that moderating a Ham Radio list while being paid by Lehigh University WAS inappropriate.

The list NEVER HAD to be moderated. A few whiners and crybabies sent email to Eschleman complaining about the nasty people, and he stepped in. It is quite obvious he enjoyed the power trip of moderating a list with 4000+ members.

If people took responsibility themselves, deleted what they didn't like, and didn't expect someone else to censor their mail, etc, much like we do with the "V-Chip" on TV, there would never have been a problem. There are always a few who have to have somebody else, whether it be a moderator, a teacher, or the government make their decisions for them, and "pre-chew" everything they consume.

Anyway, as much as I hate lawyers, if you would like to come right out and say what you want to above, we can have a nice little lawsuit on the side.

I can give one.

This site is hosted by an individual and is funded primarily by donations. If he were to suddenly get tired of doing the job or, god-forbid, be stricken with illness, it could go away very quickly. I know that QSL.net and QTH.net have been around for some time now, but so has QRP-L been around on Lehigh.edu for quite a while; things change, sometimes very quickly. I have nothing against Al, but QSL.net is a labor of love and other than personal comittment, he has no reason to continue operation tomorrow if he so choses. For personal web pages and small groups, it is a great deal. For such a large group as this, I would like something a little more "stable" (for lack of a better word).

Like most of you, I like the email list approach. Even though I belong to QRP-F, I don't like having to go to the website to post a message. With QRP-L and Yahoo! groups, I can post a message from my cell phone if I'm in the car or otherwise away from my computer.

73,

Mark - KE4MA

You expect guts from the guy that, puffing his chest out, told everyone how he "told me off face to face" at Atlanticon last year? A "telling off" I must have missed. But now, he has solved his problem by putting me "on filter."

To Most of the Group:

I too would like to express my gratitude to those who have made qrp-L available to us. I have learned a great deal from the various postings, some of which I hope to forget, but not all. I think I will turn to my ever lengthening bookshelf of QRP related material for my daily fix. This in conjunction with as many sessions as possible at the workbench

should be far more informative and relaxing than the most recent posts. For the periodic infusion of fresh ideas there are the ever improving QRP quarterly publications, which compared to the various web sources, are a day late but never a dollar short. These publications are, by necessity, moderated. They seem to be thriving for a reason, perhaps it is because instant response (knee-jerk) is not possible and cool heads prevail.

In short: pull the plug and read a book.

I feel exactly as Dan does about a host such as AMQRP. I could not have said it better than him. I like AMQRP and they do a lot of good, but I fear they are becoming too commercialized and a list run by them would be biased. Their magazine is already becoming this way. Too much power in one camp is not a good thing. There are plenty of alternatives available to us so we can avoid this situation. Please understand, I am not putting AMQRP down. I just think separation of power is good for QRP.

What on earth gives you the idea that I'm the "lone, shrill voice....?"
I have had the guts to speak up on this and other lists, and a few
others have too. (Thanks, Rick..). You probably have al l of them on
filter, too. That's the way to deal with anyone that doesn't agree with
you.

Hi All,

Just wondering, Is there a problem using a public
computer and web based email for QTH.Net.
Will it take an non ISP email address (Yahoo or
others) to subscribe with?

My thanks to Jim Eshelman for hosting QRP-L for all these years. If =
you're not already in the QRP hall of fame, you should be for your =
significant contribution to QRP. I've been a list member, albeit a =
quiet one, since maybe 1996 or 1997 so I'm sad at the loss of community =
here.=20

Warning: If you YAHOO, get ready to enjoy spam and Advertisement pages =
as you scroll through the list. If you haven't had the pleasure, when =
you scroll through the Yahoo main list, seems like every other email you =
try to look at is preceeded with an advertisement page that you must =
then move past. What a pain. I've already posted on QRP-F and I'll =
probably see alot of you folks over there.

Warning: No moderation? Just look back in the archives to those periods =
of either lite or no moderation and see if you want to live through that =
horrible crap again.

Thanks for the memories, its been a great QRP-L adventure. and this has =
been a great QRP group!=20

Jim's only mistake in running qrp-l was not banning you and Rick and putting Karl on heavily supervised probation.

Have a nice day.

I am wondering what level of current draw your "stock" Tenna Dipper =
draws.
Mine draws 43.5 ma which seems okay. However, at this level of draw, it
will pull down the 9 v. battery to 8 volts in about 30 min. of so of
operation. My dipper does not function properly once the voltage falls
below 8 volts.

Anyone else experience this??

Thanks,

Steve

Gang,

Here is the post made earlier about QRP Hall of Fame nominations. This is a reminder as the deadline is March 1, 2004

Ken
W4DU
Vice President - QRP ARCI
QRPARCI #696, GQRP#5918, FP#295, ARRL - Life

QRP Hall of Fame

Members will recall that this is the time of year for the call for nominations for election to the QRP-ARCI 'QRP Hall of Fame'.

You can submit either real mail or internet nominations but they must include the following information.

Name & Call of person nominated

Name & Call of person making the nomination.

A full description of why you think your nominee should be in the QRP Hall of Fame. Remember we may not know this person and you must convince us the person is worthy. Things such as "John Doe is a great guy and always helps out at the club" will guarantee he is rejected. Be specific in your recommendation and try to persuade us why your person should be in the HOF.

"The voting body consists of the QRP ARCI Board of Directors, President, and Vice President. Those who were inducted into the QRP Hall of Fame in the last two rounds will also be given the option to vote. Nominations may be submitted by anyone, whether a member of the QRP ARCI or not. Similarly, membership is not required for someone to receive the honor, since this is an award to recognize those who have made great contributions to the QRP community, not

just to the QRP ARCI."

If no nominations are received or the nominee(s) receive(s) less than the required vote there will not be an induction at Dayton for 2004. The BOD is adamant that it is not a requirement that we will have an induction.

Please forward your nominations to BOTH President QRP president@qrparci.org AND to the Vice President vp@qrparci.org. Nominations in writing should be sent direct to Ken Evans W4DU and I at the following addresses:

Dick Pascoe, G BPS

Seaview House, Crete Road East,

FOLKESTONE, CT18 7EG

U.K

Ken Evans, W4DU

848 Valbrook Ct.

Lilburn, GA 30247

U.S.A.

The closing date for nominations is March 1, 2004. When a nomination is received, a confirmation e-mail or letter will be sent to the person making the nomination. If you nominate someone and do not receive a confirmation, we did not receive it. You will need to receive a confirmation to insure your nominee will be considered.

Dick, G0BPS

Thom, I assume your talking for the owner with his approval?

I expect not and since I happen to KNOW Walt very well, and we both love and hate Linux depending on things, you better send him a message and get his thoughts. He has told me the big computers in 6 foot racks were very expensive and all the huge hard drives and the T-3 internet line he pays for every month, run into the thousands of dollars.

Hey Paul,

Softhome.net is my e-mail account, the QRP-L list that many of us have gone
to is at qth.net. The signup page is:

<http://mailman.qth.net/mailman/listinfo/qrp-l>

BTW, I don't run or own this list. It's been in place for quite a while in
the event of QRP-L's demise. Looks like it's working FB too. Hope to see you
there along with everyone else!

Not a chance, Donn. I don't blame Jim ONE BIT for his decisison.

When someone calls your boss, or your employer, it changes your whole attitude about everything !

One day, I was on my lunch hour, with a sandwich clearly in front of me, playing "Tetris" on my work computer. Someone "turned me in" to my boss, immediately after which I stopped playing lunchtime games on my computer. I found another place to eat lunch, and my boss also lost out, because he couldn't conveniently call me into his office. IT'S JUST NOT WORTH THE AGGRAVATION ! Even if you're "playing" on "your" time, there's always a lingering incinuation that you're stealing company time.

It's just not worth putting your career at stake !

Thanks to Jim for a job well done, and for putting up with all the crap as well. When it comes to your employment, though, you have to draw a line in the sand !

Dick K2JQ

Sounds good Steve, but I think you should include a DDS RF signal generator and include attenuator pads that cut down the output to about -170 DBmw. Then it's good for a complete rig tuneup. It will run up the cost but the readout device can be for both the Frequency Counter and the DDS generator.

I am willing to help on this project and I think it must include a nice Ten Tec box. The DDS will need a PC box soldered around it I expect to get the low signal output.

> Sure would be an opportune moment for QRP-ARCI to actually=20
> step up and do something here.=20

I'm not at all sure that would be the best course of action. IMHO, =
there is great value in having a QRP discussion=20
list that is separate from any major QRP organization. Any moderation =
that may be needed is then seen to be and
is separate from any organizational objectives. In most cases, a =
moderator can (mostly) disassociate from those=20
sorts of things, but if a thread were to develop discussing something =
negative about ARCI and that thread
turned ugly so that a moderator had to deal with personal attacks, if =
that moderator were an ARCI representative,
would it really be seen as being impartial? Would a whole new thread =
erupt about whether the moderation
was appropriate? Could any human being really trust himself or herself =
to always be impartial under those=20
circumstances? It could even go in the other direction, with a moderator =
bending over backwards to appear
impartial, so not moderating as appropriate.

I prefer having a watering hole that is a real grass roots project. It =
is like the difference between attending a town
meeting where things are done formally to getting together in the bar =
after the meeting to say what's really on
your mind. We have plenty of opportunities to deal formally with our =
organizations; let's keep a place that allows
us to discuss things openly, subject only to the general guide that the =
posts be about QRP and that we conduct
ourselves in a responsible fashion. Most moderators recognize this and =
moderate far more by leadership than
by force.

The problem seems to be the Yahoo email, not the Yahoo lists, yet there is
constant confusion over the two. We have a list we use here in Houston for
our
QRP group, and I co-moderate it. I have had zero spam I could attribute to
the

Isit and I do not have a Yahoo email address.

In reality, I suspect that I, like most on this list, will wait to hear w=
here
we move and then switch over. =

My Yahoo experience has been very different Bill. I've been on Yahoo
for many months now. I've probably gotten a total of only 6 or 7 spam
messages during that entire time. I do not know the reason why our
experiences would be so vastly different. Can't say I'm not glad
though that spam isn't finding me. HI

I would suggest those that are considering Yahoo, read their
"Privacy"policy..thoroughly. Some time ago, when I attempted to cancel my
Yahoo account because of SPAM, I was informed that they would keep my
personal information for THREE YEARS, and do with it what they wished.

I am happy that you have had no problems, but, every time I have been involved with anything at Yahoo, the percentage of junk I get goes up. When I leave Yahoo, the level returns to a normal (if there is such a thing) level.

Do not know the reason, and do not care.

Actually, QRP ARCI has already stepped up and done something. We have hosted QRP-F (<http://www.e-discounter.net/qrp-parci/>) since 1999. Try it, you may like it.

No Karl....I was speaking from my own experiences as a list owner who
foots all the bills for the list, the bandwidth, the server, the domain
name, the service calls, etc.

Some of the list members here are members of the list I own...and I've
never asked them for a dime.

I put the list up as a "pay back" to all the folks who have helped me and
other newbees over the years.

So, please, unless you know exactly what I'm refering to, which obviously
you didn't, don't play the word games.

Great!

It appears that the consensus is to use qrp-1@qth.net for the replacement list. A nice feature is that QTH uses Mailman, which automatically creates archives.

Replacing the reverse input voltage diode with a Shottky will help a
little, as would shorting it out entirely, but then you'd have to be darn
sure not to hook your battery up backwards, even for an instant.

All you have to do is go into your preferences and uncheck all the boxes that 'permit them' from sending you spam. I'm subscribed to roughly twenty-five Yahoogroups and don't get a single ad from them.

Mime-Version: 1.0
Content-Type: text/plain; charset="us-ascii"; format=flowed

For Sale:

One Elecraft K2, serial number 02289.

Have K160RX 160m module unbuilt.

Have KI02 RS232 interface unbuilt.

Have KAF2 Audio Filter and Real Time Clock unbuilt.

My original investment is:

K2	-	\$599.00
K160RX	-	\$35.00
KI02	-	\$89.00
KAF2	-	\$79.00

total value \$802.00, IF I have my math right. Did this without a calculator.

I can build, test, and install the three unbuilt modules in two days if you wish. Also can send digital photos or put them on the web for your look see before you buy.

Rig is in excellent shape and working condition and I'll run it through all the tests and align using the PC software as outlined on the Elecraft's web page while waiting for a buyer.

Your price for the above only \$680.00 and that includes priority mailing with insurance in the USofA. With all manuals.

Reason for sale. Going to get a K1 and will be using the TenTec Argo V as main rig. I'd like to see the K2 find a home where it would get used.

I don't do PayPal and checks will take some time to clear, so USPS MO would get the rig shipped next day after arrival in the mail box.

Hi Trev... thanks for the e-mail.

I tried signing up to qrp-1@mailman.qth.net last night, but I haven't rec'd an approval notification yet. My current web based mail that I have been using lately is eudoramail, but I signed up for softhome this morning.

So far I haven't rec'd approval for either address yet. Others seem to have been approved. Maybe it's because I'm so far away (just kidding)!

Thank you Rob, all today I have been wondering why there has been all of the negative comments about Yahoo. I have been a member of Yahoo from 1999, lots of groups, shopping, etc, and have never had a problem. I must have set the preferences way back then and forgot about them.

Little more, sign on -> Acct. Info -> enter passwd -> Edit your marketing preferences -> change all to No.

John

hi Jerry,

Just wanted to say thanks very much - I received kit #491 the other day and already have it on my K1 - what a great paddle! It does not move around on the table and is just the right weight.

I might have committed "heresy" by applying a small bit of liquid electrical tape along the bottom to protect the wires since this thing will be jostled around pretty good over the next few years.

Hi Steve...

I haven't measured the current, but when I first built mine, I noticed the frequency moving quite a bit; every time it told me the frequency, it was different.

Then I realized I was using a battery that was no good. When I hooked up a good battery, the frequency stays right where it should.

What a great gadget. I use it quite a bit.

I joined the list called QRP-L on qsl.net and it's easy and the owner of the list has to approve you. This is because the darn spam people will try to join your list! I had to do the same thing with qrpdx@yahoo.com, and I killed the request to join of about 10 Spammers.

I found the email address of the owner and sent him an email asking him about moderation of a large group.

the owner of this list will have a lot to say about how well it works. I do not know a J.M. Lowman, but he seems to be the owner of this list.

You don't necessarily get the spam from Yahoo.

I setup a several new address some time back and used them for over 3 month without receiving a single spam email on those address, but within 10 hours of signing up for a Yahoo group with one of the addresses the SPAM started pouring in, the same thing happened with a second email account I set up.

I personally will not sign up for another Yahoo email list again.

The Eastside Outdoor Ham Club, located in Terre Haute, Indiana,
has a PIC-EL building and learning group. 7 of us have PIC-EL
boards on order or the orders are in the mail. Hopefully they
won't run out of PIC-EL boards. When our PIC-EL boards
get here we're going to build them together. That will take place

either at Rose-Hulman Ventures or at Corporate Square here
in Terre Haute.

The Eastside Outdoor Ham Club isn't a pure QRP club, we do
a lot of hidden transmitter hunting too. But we do enjoy getting
out with QRP rigs and operating in the great out-of-doors. We've
also had group builds before of Warblers, CPO's, fox boxes, a couple
of antennas, etc. You can learn more about our little club at these
links.

Home: <http://mailman.qth.net/mailman/listinfo/eastside>

Web Page: <http://www.qsl.net/kc9bxv/>

If you're in the Terre Haute, Indiana, area and want to join our little
group build you are welcome to do so. Just send an email to me at
wd9eyb@arrl.net and I will let you know when it's going to happen.
You are responsible for getting your PIC-EL board ordered and
doing the Elmer 160 lessons.

Thanks,

Jim Osburn, WD9EYB

A year or so ago Yahoo during an upgrade Yahoo reset all preferences to
receive spam. Users had to reset the preferences to be removed from the
lists.

I use Yahoo extensively and have never had a problem with it.

Thank you Rob, all today I have been wondering why there has been all of the negative comments about Yahoo. I have been a member of Yahoo from 1999, lots of groups, shopping, etc, and have never had a problem. I must have set the preferences way back then and forgot about them.

Little more, sign on -> Acct. Info -> enter passwd -> Edit your marketing preferences -> change all to No.

This is espically true IF you signed up by email and not by going to the web site. You can't get to any preferences this way since you don't have a yahoo account and don't have a password. They gotcha!

I received a rejection notice! Then I looked further down the page and
my name and callsign were requested so I replied with that information.
Nothing heard since then.

It's not another case of someone leaving their vox on, is it? Back when I had a rig capable of receiving the frequency, I'd always hear the trademark sound effect of an incoming AOL instant message on 14.230.

I was hearing it this morning. It was spread out from 21.070 all the way down to 21.025.
I thought it was my RX at first. Then I thought Oh my God I hope it isn't BPL.

It's also weak here but it's an AM broadcast station playing oriental music. I checked and it's not a second harmonic...

Same here. I imagine that Jim Lowman is overloaded by now and it may take awhile. That's OK with me. Based on my experience with the Elecraft, CW, and FISTS lists based at QTH.net I think this is a good choice for the new home of QRP-L. Guess we'll see.

This is kind of a long story so I'll try to keep it short.

The problem is that when I turn the rig on I get a blinking display. Everything looks good on the display and all of the panel functions work including the menus. If I try to transmit the screen goes blank with the exception if TX ERROR being displayed.

It all started when I needed to replace the set control which I did with the help of a local friend of mine but while re-assembling the front panel the header latch on the main board broke which I was able to fix using hot glue and the rig worked fine. Today I needed to pull the front panel again and in doing so I pulled the cable out of where I had fixed it so I needed to fix it again. I noticed this problem after fixing the header/cable and that I had hit two of the pins for the optional filter and they were touching. Don't know if I did any damage doing that.

Any help/advice would be appreciated.

Thanks.

Yesterday I heard some sound effects on as I was trying to work PSK. It's not unusual, since I often

hear the "bonk" of the Windows default chimes on various PSK frequencies.

I was very busy earlier this week and only began late last night and today to wade through all the messages on the the 'end' of QRP-L, its 'demise', "too many chiefs," the evil menace of YahooGroups, a public lynching of a member based on vague supposition, etc.

The one positive thing I can see so far is that is that the handful of people for whom I reserve my highest respect have either kept their mouths shut or only spoken appropriate well-deserved words of thanks to Jim for all his years of service to us.

The hoopla is ridiculous ... JUST WHAT IS THE BOTTOM LINE HERE? ... We came here to talk QRP ... The only thing we should be hearing on this subject here is discussion to answer the simple question "how do we go about keeping the list going post 2/29?"

In my rarely very humble opinion QRP-L has created a community that is the single most valuable resource in all of ham radio.

So lets not take shots at each other, put down the AMQRP, whine about YahooGroups, whatever ... let us, instead, put our energy towards finding out what we can do to keep it alive ...

cheers ... 73 de brian, n1bq

Hey Nelson and all,

I wouldn't worry too much about getting approval, it probably has to be done manually by the list owner and with so many of us joining in the next few days, there may be a little delay.

Hope this all gets smoothed out soon and we can get back to business as usual.

Take care...

I would like to thank the gentleman who suggested that the 4 gang switch could be rebuilt and I insisted it couldn't!

Well, a fool is born everyday, I just happened on single push button switches of the same type used by Heath in the 4 gang version and I will be able to remove the old single units and retain the push button mechanism. After installing the new single units, its just a matter of reinstalling the complete 4 gang switch as the original was soldered in.

The reason for this was, the unavailability of these switches now adays.

If you are reading this sir, I wish to thank you for your suggestion.

I wish you Best Regards, 73' John KF70M

DDS Signal Generator (option), and if it has sweep mode one could use it also to check filter alignment, front end tuning etc.

Keyer output to send test pattern to the transmitter, and check it out while having low duty cycle.

Before heading off on the trail (short or long trip) I found the following invaluable for an emergency (besides the Snickers Bars):

---A dozen or so WIRE NUTS of various sizes. You attach any wires with these wire nuts (Thanks to KU7Y) including coax.

---Dental Floss. You can get a 100 yards or more of strong stuff in a small package (Ain't that the tooth--)

---Couple of fishing sinkers to help get those lines up in the trees

---Chem Lites: I get these from the marine seriving places (expired date wise ones for free) and use them for emergency lights at night.

---Small spool of enameled wire (say 50 yards of #30)

---Elastic tubing to make a sling shot out of a branch

---Space blanket

---EPS-1 DC-DC (DC converter kit that takes an input of anywhere from 2 to 16 volts DC and brings it to 12 volts)

What do some of you take along QRP hikes for emergencies?

Content-Transfer-Encoding: 7bit

Do I need a new soldering iron? I don't have enough soldering experience to know if I'm using a good one or a bad one. I'm not sure if my soldering skills or my soldering iron is at fault.

The soldering iron I've been using is the Radio Shack 15W/30W soldering iron. Much of the soldering iron has gunk on it, including the part that connects to the soldering iron tip. I have begun trying to solder by heating the wire instead of heating the solder directly, and it often takes too long to melt the solder, more than the few seconds I think it's supposed to take. (This is very noticeable when the lead touches a neighboring area of solder. I think the other area of solder acts as a heat sink.)

On eham.net, the Radio Shack soldering irons are heavily panned:
<http://www.eham.net/reviews/detail/318>

Note that the average rating is only 2.1 out of 5. 3 of the 8 ratings are 0, and 1 of the 8 ratings is 1. Even the more positive reviewers say it's not as good as other brands like Weller.

What do you all think? Should I replace my Radio Shack soldering iron with a Weller? Or can my soldering problems be attributed to a lack of skill on my part?

I just received my daughter card from Kitbuilders. They soldered the DDS chip on the board for me and did a fantastic job as compared to the one I did. Mine doesn't work and theirs works great.

I just got 25 messages from the New qrp-l list. This list appears to be where qrp-l will be for the near future. To join this list point your browser to:

<http://mailman.qth.net/mailman/listinfo/qrp-l>

and give it your email address you want the list email to go to and a simple password like your first name and in a few hours, Jim Lowman will get around to letting you in. He is super busy now because the whole list is rushing over to sign in...:-)

In my opinion this is the best of many possible solutions. And I had nothing to do with it...hi

Alan,

That's an excellent list bar that one item. I add all sorts of other bits and pieces, including a superb coax connector adaptor set from Bird (you can find these at rallies sometimes), and a suite of Leatherman and Swiss Army multi-tools.

But I must point out that a space blanket is a very poor substitute for a nice heavy-gauge plastic 'bivvi' bag (agricultural fertiliser bags suitably cleaned are free and ideal). 'Space blankets' try to work by a flawed theory, that reducing radiant heat loss reduces body heat loss. In space, this is true, but on earth wind and water (rain) are much more potent - and space blankets are pretty flimsy and useless at combating either. Several scientific studies of different types of survival bag have been performed (we did our own a few years ago), and all to date have shown a plain heavy plastic bag, to reduce convective heat loss and eliminate evaporative heat loss, is much better.

72,
Howard.

What I am waiting to hear is where the folks who run Atlanticon, Lobstercon, Ozark-con, Pacificon and the other gatherings, as well as those who offer the great kits that have become available, to let us know which list they are going to be on.

Then, I will decide which one to join.

All the infighting about which service or list is best is just so much background noise.

Actually, it was a matter of who could hear George and a large dose of luck for the two of us who could. He was barely audible above the noise here in North Texas - he is in the central part of the state about 250 miles away. Missed him the first round last Fall but got lucky this time. Believe me, all the Tornados tried their best to pick George out of the noise and QRM. In this area, the band can be counted on to start going long at around 0230 at the latest and sometimes sooner. So, you work the tough ones as early as possible. With George, I got REAL lucky!

A PERSON can not say anything negative about arci on this list without being met by e-mail from the president of arci on down on how nothing negative is supposed to leave the organization and definetly not end up on a public list...

Arci, is already very secretive or so it would appear... as no information is supposed to be passed on except what the pres and board approve.... you are in a position, as a new board member, to "look under the carpet" and (I still trust you to be truthful even when I don't think you have it entirely correct...) say it's clear, not so bad, or in the process of being corrected...

You got's integrity man....and just changing the phone number isn't going to work here... some butts need to be kicked and the one

doing the kicking has to be "apart" so as not to be succceptable to "round about" methods of coercion...

staying clear till the smoke clears, may not be a bad idea... in this case.. and congradulations on ur election, the arci has been a great bunch of folks over the years, at least to my knowledge... and I kneaux ur gonna make it even better...

U might want to stay clear of this one (the demise) as clear thinking isn't going to be an asset as things get heated.....

I would go with a weller. If you plan to use it a lot and can afford it, I would go with a temperature controlled model. A good iron can make a noticeable difference. You kind of get what you pay for, radio shack does not have any good irons in the stores.

Hi Bob, it's the QRP-L list on the qsl.net server where everyone
 is going. If you need help let me know.

Hi George, move over to the list on qsl.net where we are all going.
It's going to work fine! Bruce is already there.

Jean,

>Hello everyone,
>My PIC-EL kit is complete now and I am going to the test stage.
>It feel good. We will see it the little baby is alive later.

Great!

>For now I wonder
>Do you use some kind of box for the PIC-EL ?
>Does not seem practical to use a box, unless the cover is open !!!

Please! Put it in the plastic box: PacTec CM5-125 (also available from

Mouser 616-63049-510-039). I spent too much time trying to get the silly mounting holes on the PIC-EL board to line up properly with the mounting holes of that box (moving parts around) to have nobody use it! :-)

Seriously, you don't really need a box, although it is nice. I would suggest using something, however. You can use some sort of stand-offs instead. Just having it lay flat on a workbench is asking for trouble - too easy to short out the traces on the bottom with stray pieces of wire or other "things" on the bench. I know! (The box offers the best protection.)

>For now my kit will run on 12V gelcell battery.
>Does someone could tell me the average current use by the PIC-EL
>Maybe I could put it on a plastic plate with a small battery.
>Tell me what you did with your PIC-EL
>
>73 de Jean (VE2GHI)

The latest measurements that I made (with a PIC-EL prototype) resulted in the following current draws:

PGM mode - without Daughtercard	-	13 ma
PGM mode - with Daughtercard attached	-	88 ma
RUN mode - without Daughtercard	-	13 ma
RUN mode - with Daughtercard active (running PICELgen code)	-	138 ma
RUN mode - without Daughtercard but speaker active at 4000 Hz	-	65 ma
RUN mode - with speaker active and Daughtercard powered but not initialized	-	185 ma

(This is worst case - with the Daughtercard NOT initialized.)

72,
Craig, AA0ZZ

Jason,

My vote would be for more skill. I have used soldering irons that are over 20 years old with very good success. In fact before I bought a temperature controlled soldering station I used an old Weller handle with interchangeable heating elements and replaceable tips. I bought the assembly in 1974, and still use it. For a temperature controlled iron I use a military surplus station I bought from Fair Radio Sales back in the mid 90s.

There is no substitute for experience. Without experience your joints will always look like a beginner's first joints. Get some experience and your joints will get consistently better until you can be proud to show them off.

Soldering is not an easily acquired skill; it takes practice, practice, and more practice. Even now with about 50 years gone since I made my first solder blob, I think I would practice a few joints before I soldered a project. Get yourself a soldering guru and spend a few evenings with him. Listen to what he has to say about your techniques and solder joints, and try to improve each time. It won't take long but the payoff will be great.

Bruce

Yes he is and lots are waiting now I expect, but it looks as though the change to qsl.net will be orderly and prompt. Sure makes me feel good!

Howdy Gang:

Am dual posting to both lists to see if my first message gets thru on the new list.

Just completed the RH-40 and RH-20 rigs and have a question about the RX and TX oscillator frequency relationship.

Given an IF frequency and IF crystals at 9mhz what should the appropriate RX and TX oscillator frequencies be as read on a freq counter??? Should it be something like TX at 9.000 mhz and RX at 8999.250 mhz???

The RX oscillator of course being at the product detector and the TX oscillator being at the TX mixer.

I just aligned both rigs up by ear using my ARGO V and they sound fine. I just want to know if such a rig can be set up by using a freq counter only.

Thanks for any assistance that can be rendered.
